E-mini Stock Index Futures and Options

E-mini stock index futures and options on futures offer liquid, electronic tools to take action on your market views.

Leading Market Benchmarks

- Gain exposure to the full spectrum (small-, medium- and large-cap) of U.S. equities opportunities
- Or expand your strategies to include global exposure using U.S. and international index futures

Efficiency

- Cost effective
- Deeply liquid and transparent markets accessible worldwide on our advanced CME Globex electronic platform
- Broad index exposure with a single trade
- Risk-based performance bond vs. Reg. T margin treatment

Take advantage of every market move.

Seek to turn your market views into market profits.

By taking outright long or short positions on our benchmark index futures and options contracts, you can express views on – and potentially gain from – anticipated price movements in the stock markets. If you believe mid-sized U.S. stocks are about to rally, for example, buying E-mini S&P MidCap 400 futures at today's prices may help you benefit from increasing returns in the underlying index and its constituent stocks. Our extensive lineup provides opportunities to express views on small, medium- and large-cap stocks in the U.S. and international equity markets.

Access volatility, correlations and sector exposure.

Volatility in the markets and the relative strengths/correlations of stock indexes like the S&P index, NASDAQ-100 and Dow Jones Industrial Average can present compelling opportunities. Using different combinations of stock index futures and options on futures, you can seek to capitalize on those opportunities or add the returns of a highly performing sector represented in one of the underlying indices.

Capitalize on price disparities without picking market direction.

Spread trading stock index futures may provide flexibility to benefit from price discrepancies among underlying indexes without having to pick the overall direction of the market – so whether the overall market is rising or falling, there may be opportunities to profit. What's more, spreads may offer a lower risk profile than outright positions, reduced performance bonds (margins), and potentially lower transactions costs than doing a similar strategy using a basket of stocks or ETFs.

Key benefits of CME Group.

Liquidity

Our exchanges comprise world's leading marketplace for stock index futures and options on futures. Our E-mini S&P 500 futures average 2.3 million contracts a day, making it the most actively traded stock index futures contract*. Tight bid-ask spreads and active markets on index enable you to get in and out of positions quickly.

Efficiency

With stock index futures and options, you can gain equivalent exposure to the underlying market represented by the index, with fewer transactions and potentially lower costs than trading a basket of stocks or ETFs. Futures are not subject to annual management fees and offer access to greater notional values with lower upfront capital requirements – providing a cost-effective means to harness market opportunities.

Transparency

Everyone who trades E-mini products – from the largest financial institutions to active individual traders – has access to the same prices with complete anonymity in all bids, offers, and execution reports.

Security

CME Group provides security through centralized clearing, guaranteed counterparty credit and segregation of customer funds.

Extensive Lineup of Benchmark Contracts Offers Choice

- *S&P 500 Index* – Tracks 500 of the leading large-cap U.S. company stocks
- *NASDAQ-100 Index* – Tracks the top 100 large-cap, non-financial issues in The Nasdaq Stock Market
- *Dow Jones Industrial Average* – Tracks 30 of most widely followed large-cap U.S. stocks
- *S&P MidCap 400 Index* – Tracks 400 medium-sized U.S. company stocks
- *S&P SmallCap 600 Index* – Tracks 600 small U.S. company stocks that meet set financial viability criteria
- *MSCI EAFE Index* – Tracks more than 1,100 companies in more than 20 developed markets across Europe, Australasia and the Far East
- *MSCI Emerging Markets Index* – Tracks more than 20 emerging markets around the globe and offers low correlations to developed market indices

Futures trading is not suitable for all investors, and involves the risk of loss. Futures are a leveraged investment, and because only a percentage of a contract's value is required to trade, it is possible to lose more than the amount of money deposited for a futures position. Therefore, traders should only use funds that they can afford to lose without affecting their lifestyles. And only a portion of those funds should be devoted to any one trade because they cannot expect to profit on every trade.

All references to options refer to options on futures.
